Happy New Year 2013 新年進步

Latest Breakthroughs in Language Laboratory Solution

Pragmatically, with the increasing competitions in the global marketplace, being proficient in a second or even third language is almost a prerequisite to excel in your job or business. With the definite importance of language learning, the question becomes – how to achieve it?
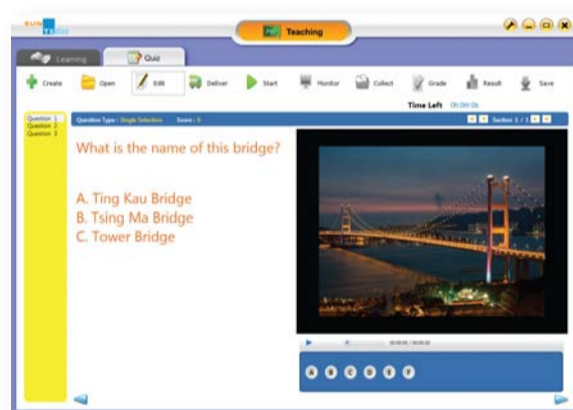

In the past era, hardware-based language lab such as the combination of cassette recorder and amplifier was very popular. However, end users were troubled with problems like low compatibility with the latest multimedia formats, high setup and maintenance cost, inconvenience of students' records keeping, durability, short battery life, and more. Hence, those who were fed-up with the use of hardware began to look for alternatives. Nowadays, more and more educationalists turn to use Digital Language Laboratory (DLL). A software-based language lab has many benefits, namely, supports diversified formats and store in digital form, ease in setup and maintenance, customizable teaching styles, helps students build up confidence in speaking foreign language and encourage lesson involvements.

In fact, our DLL software has been used globally for years already and lately we are developing our latest *DLL 6.0* version to bring greater user experience through our revolutionized interface and specially designed quiz module for language learning.

With a view to having a more easy-to-use GUI (Graphical User Interface), we have combined the manual & normal modes while keeping most of the buttons unchanged so that a balance could be struck between being user-friendly and adaptability by existing users of older versions

New user interface

New quiz module

Thanks to the feedback from our loyal customers, we acknowledged the importance of having a comprehensive quiz module for examination purposes. Besides allowing standard MC-type question, voice recording is supported so that teachers can perform oral and listening tests. Through this digital platform, teachers can take advantage of smooth quiz management, quiz process monitoring, and automatic paper-collect & marking with detailed graphical quiz report. It has never been easier for teachers to evaluate students' progress in language learning. For students, they will also enjoy the multimedia content that could be placed with ease by teachers in the quiz. In a nutshell, our DLL 6.0 is definitely an ideal platform for language teaching as well as learning and helps to bring more interaction in language practice, quiz and examination. However, please continue to share your precious ideas to us and we will keep on our development to bring new features to our customers. If you have any enquiries or comments about our products, please feel free to contact our Sales Team at sales@suntechgroup.com.

In Chinese Zodiac, 2013 is the Year of the Snake. Because of cyclical lunar dating, the first day of the year can fall anywhere between late January and the mid-February. On the Western calendar, the start of Chinese New Year this year falls on Sunday, 10th February 2013. In our traditions, snake represents flexibility, endurance and wisdom. Last but not least, Gung Hay Fat Choy! (which means "Best wishes and congratulations. Have a prosperous and good year.")
